Date:

The Institution has facilities for alternate sources of energy and energy conservation measures.

Over the past few years the college Management has taken a conscious decision to replace existing lights and lighting equipments by LED sources. Dedicated efforts have been made every year with a sizeable amount being spent on buying and fitting LED lamps and tube lights across the college premises.

Old fans and other electrical equipment have been regularly repaired/or replaced with newer, energy- efficient ones. Heavy equipment like water pumps are regularly serviced and maintained to keep them functioning optimally.

The Internal Quality Assurance Cell (IQAC) played a proactive and facilitative role in promoting sustainable practices within the institution by encouraging stakeholder participation and environmental responsibility. Acting upon the collective resolve of both staff members and alumni, the IQAC initiated a consultative process to identify feasible green initiatives that could be implemented within the campus. Through meetings, feedback mechanisms, and collaborative discussions, the proposal to install six solar-based lamps was formally adopted. The IQAC not only coordinated between the administration and stakeholders but also ensured proper planning, resource mobilization, and execution of the project. This initiative reflects the institution's commitment to renewable energy adoption, reduction of carbon footprint, and promotion of eco-friendly infrastructure, while also strengthening the bond between alumni and the institution through meaningful contribution to campus development.
